

Protektor Pro

Digital Guard Tour Patrol Solution

Spirogyra Software Private Limited

Protektor Pro is a QR code based Guard Tour Patrol Solution which offers you :

- Real Time Data about how efficiently your Team of Security Guards is protecting your work site.
- Real Time reports of any incidents which have taken place .
- Based on the risk assessment of the First Responder, it escalates the Response level to the incident.
- All data is stored for 180 days on our Servers .
- Real Time Dashboards provide you tangible and objective data.
- A digital tool to optimise your resources.

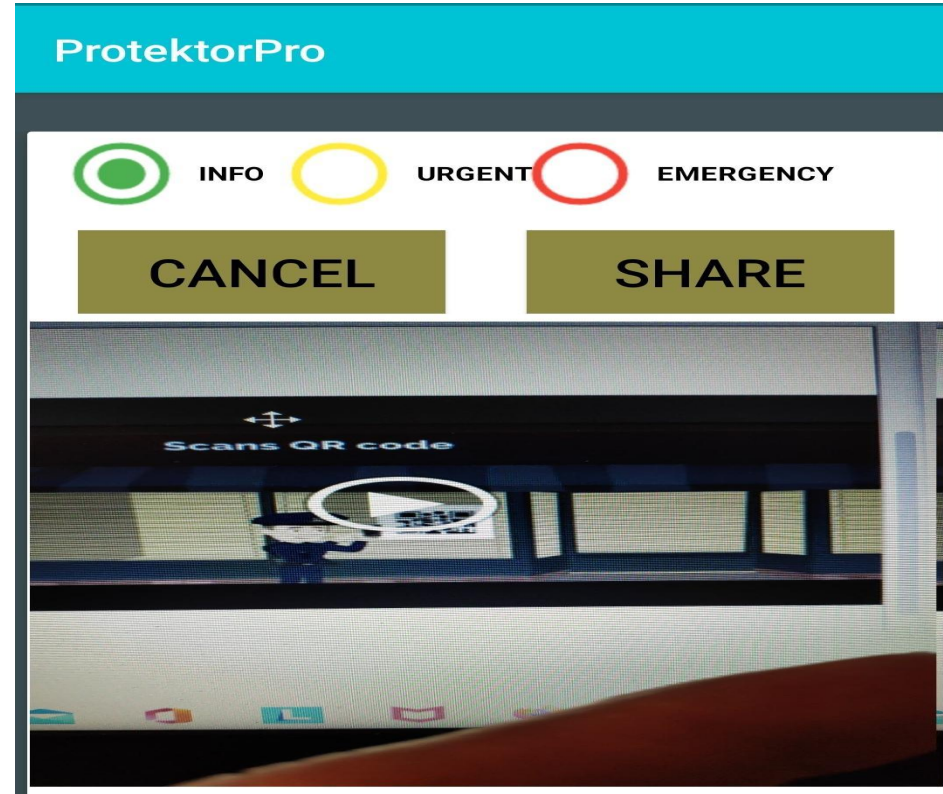

The Security Guard is provided with a schedule which tells him when he has to visit a specific Checkpoint.

- When he arrives at the Checkpoint , he will open the Protektor Pro App on the smartphone
- He will then click on the Scan Feature.
- He will scan the QR Code at the Checkpoint.
- He will be prompted to take his selfie.
- He can now move to the next Checkpoint.
- The Protektor Pro System has now registered the Time Point,the Guard's picture and the GPS Coordinates.

If the Security Guard observes an incident during his patrols which he thinks is worthy of reporting , he will open the Protektor Pro App, and :

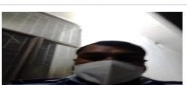

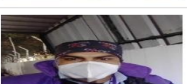

- Click on the Share Feature
- He can then add a report which is a picture or text, or a report with Text and picture/s.
- He can also assess the risk and grade it accordingly. As Green which is incident worthy, Yellow which needs attention of his superiors and Red which means its an emergency and requires immediate attention.
- The report with the specific color code is visible to all those empowered in Real Time. And in case of a Red Event, will ensure all those authorised will receive immediate notifications.

All authorised officers will receive daily reports in their mailbox every morning. This is in addition to the access to a 24/7 Dashboard which offers Real Time data.

- The Reports will provide credible information as to what time a specific guard was at a specific checkpoint.
- The identity of the guard with a selfie picture.
- The GPS coordinates where the Selfie was taken. If you click on the coordinates, it shows you the google map where the validation happened.
- Incident reports will be available on the Real Time Dashboard . Click on the Yellow Circle to access the Incident Report.
- GPS coordinates of where the incident happened will also be available to enable a quick and effective response.
